

PRESS RELEASE

Integrate your OR with S-CAPE Prime OR:

S-CAPE®'s new product line Prime OR for the integrated, digital operating room allows safe and effective use of all image, video and patient data – before surgery, during surgery and after surgery. And there is much more to it!

Berlin, April 10th, 2014: The new management team of the company S-CAPE will present its new product line Prime OR during this year's *conhIT* tradeshow from May 6th to 8th in Berlin. Prime OR consists of five individual modules, which can be customized. This unique solution serves as an intelligent information hub for the O.R. itself as well as merging the O.R. with the hospital workflow.

Björn von Siemens and Dennis Kogan form the new management team of S-CAPE, a company located in Saxony and, as of recently, also in Berlin. Together with their colleagues from product management, Mr. Kogan and Mr. von Siemens will present the product line PRIME OR at the *conhIT* tradeshow in Berlin, hall 1.2/booth E-113b.

The new platform Prime OR consists of five modules for process optimization inside and outside the O.R. Prime OR received a Frost & Sullivan award as the leading system of its class.

Prime OR *Hub* is the core hard- and software module, which allows easy visualization of all clinical content and patient-related data. It serves as the central access to any digital information in the O.R.

Prime OR *Direct* is a scalable, vendor-neutral integrator for the user-suitable distribution of all available information inside the O.R.

Three additional modules, the tele-medicine solution Prime OR *Share*, Prime OR *Studio* for the documentation of clinical image and video information, and the communication platform Prime OR *Link* complete the offering and make information accessible hospital-wide. Taken together, Prime OR acts as an integration platform for digital information in the O.R. and beyond.

“We are quite proud to present our new product line Prime OR to the public,” says Dennis Kogan, managing director of S-CAPE. “The five modules of our Prime OR solution enable us to offer a vendor-neutral, scalable integrated solution for the OR which allows an efficient work flow. With Prime OR, seamless integration into existing hospital IT structure is feasible. This differentiates us from our competitors.”

In April 2014, the strategic consulting firm Frost & Sullivan presented Prime OR with the European Frost & Sullivan Award for Product Leadership. “We are very happy about this

award,” said Mr. von Siemens, managing director of S-CAPE. “Our on-site customer service and the cooperative teamwork with our customers enabled us to further optimize our product offering. This is why we are confident that we can keep fulfilling our customers’ future needs regarding patient safety, efficiency and user-friendliness.”
